

Hello, and thank you for reading my concerns. I am strongly against any attempt to control or limit in any way the current or future broadcasts of XM-Radio, especially traffic and weather.

You see, I am a pilot and instant weather for flight OR driving via satellite is a huge leap in dependable service not to mention a huge leap in technology.

If the NAB or any other Federal regulatory organization want's to limit what goes on the air waves, get rid of garbage like Howard Stern, N.P.R., and garbage television like Queer eye for the straight guy, Oprah, Jerry Springer, MTV and many others. This would do more for the country and its youth than some could even imagine.

Now I don't claim to know all there is to know but I am personally tired of regulations and agencies behind them standing in the way of progress.

Let look at cable television for instance. You have a huge network of underground cable cluttering up the underground. This is costly to maintain and has marginal service. I say bring on satellite T.V. and let cable die on the vine! Hopefully nobody is going to stand in the way of progress here.

I completely support XM-Satellite Radio in all their ventures and say no absolutely not to stopping traffic and weather.

Thank you again.
